

Surgical Prices

- We perform the spays and neuters with the same quality medications and equipment that we use on all our surgeries. Each surgery we do is therefore priced well below our actual cost. We do this to express our appreciation to you for entrusting us with your pet's health care and because we are concerned with pet overpopulation in our community.
- Spays, neuters, and declaws performed on pets 4 months or older
- Surgical prices include anesthesia, surgery, and normal post-op care and medications. Prices may vary if pet is unusually overweight, pregnant, or has a retained testicle.
- Additional care or medications for unforeseen complications not included in price.
- All pets must have had basic vaccinations in the past 12 months by a licensed veterinarian.
- At home post operative pain medication is available and recommended for an additional fee.
- Post-operative medications are available and strongly recommended to make your pet's home recovery more comfortable. Based upon your pet's weight, cost ranges from \$12.00-\$30.00.

Spay (female)
